Acceptance Test Cases

What is Functional Testing?

Functional testing is a sort of software testing that determines whether a software programme or system meets its requirements and functional specifications. It is a black-box testing technique that focuses on testing the system or application's functionality.

Manual or automated testing technologies can be used to do functional testing. The testing approach chosen is determined by the system or application's complexity, available resources, and project deadline.

Role of User in Functional Testing:

The role of a user in functional testing might vary depending on the type of testing done and the project's specific objectives. Users, in general, can play a key part in ensuring that the system or application works well and meets their needs.

These are some examples of how users can participate in functional testing:

Clients may be requested to engage in User Acceptance Testing (UAT), which is a sort of testing in which end-users test the system or application in a real-world setting to confirm that it satisfies their needs and is functional.

Users can provide feedback on the functionality of the system or application, as well as report any bugs or issues they encounter while using it.

What is Acceptance Criteria?

The acceptance criteria (Expected Outcomes) are used as a basis for building test cases and validating that the program meets the requirements stated by the stakeholders throughout the testing process. When all of the acceptance requirements are met, the software is declared accepted and ready for release.

UAT (In scope - Out of scope)

UAT In Scope

Story points LF1 - LF27 in sprint 1 are covered under the test cases

UAT Assumptions:

- 1. All the test cases are performed manually from a user's perspective.
- 2. All UAT are documented.

UAT Constraints

- 1. Testing Operating System- Windows
- 2. Testing Browser- Chrome

Note - Code Coverage Tests will be performed by the testers at the end of the project.

UAT Acceptance Test Cases

The test cases are already written in the excel uploaded as "User Acceptance Test Cases".

UAT Summary

The Acceptance Criteria for the user stories is the same as the expected results column in the uploaded excel "User Acceptance Test Cases".

Testing Screenshots

stress, relate to others, and make healthy choices.

Welcome to Self Assessment Portal!

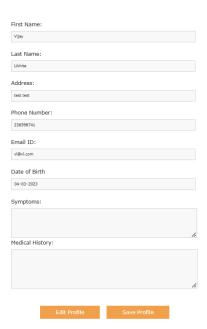

Regular check-ups can help find potential health issues before they become a problem. When you see your doctor regularly, they are able to detect health conditions or diseases early. Early detection gives you the best chance for getting the right treatment quickly, avoiding any complications. By getting the correct health services, screenings, and treatment you are taking important steps toward living a longer, healthier life.
